

BD COVID-19 response, manu

BD COVID-19 response — manual inventory allocation

BD recognizes the essential role our critical medical devices play in the identification, diagnosis and treatment of COVID-19. We have ramped up production and continue to meet current demand for the vast majority of our products. However, we are seeing high demand in select product categories because of a prolonged flu season and the coronavirus pandemic. We have placed the following products on manual inventory allocation to supply our customers as much as possible during this challenging time. For the latest on BD's response efforts, visit bd.com/COVID-19.

ALARIS™ SYSTEM AND INFUSION DISPOSABLES

Last updated March 25, 2020

Infusion Sets

To help ensure continuity of supply, we have placed all BD and Alaris infusion sets on **manual inventory allocation** until further notice. As a part of our supply continuity plan, we are also reducing the number of available product SKU's of our Alaris System pump sets, enabling us to maximize manufacturing production while ensuring we meet our customers' clinical needs.

This manual inventory allocation process allows BD to ensure an equitable allocation of infusion sets and retain greater visibility and control of available product to effectively serve our existing customers as well as serve areas of the country with high census due to treatment of COVID-19 patients. While this manual inventory allocation process is in effect:

- BD will be reviewing all orders and allocating inventory at 80% of normal order volume, increased inventory will be made available to areas of the US with high census due to treatment of COVID-19 patients, subject to change as the situation evolves
- Due to the change in clinical care that our customers are providing (i.e. cancelling elective surgeries, etc.) and in an effort to focus on COVID-19 priorities, all partial or complete orders per week in excess of these values will be cancelled
- Customers may receive a backorder notification when an order is placed
- Orders may be filled as partial shipments as inventory becomes available
- We are working closely with our distribution network and channel partners to ensure product is available through standard distribution channels. Shipments will continue to be fulfilled by your BD authorized distributor. BD relies upon the distribution and logistics expertise of our channel partners to ensure timely delivery of product to our valued mutual customers. BD is not able to fulfill orders directly to individual customers which are normally serviced by a BD authorized distributor.

An important element of our plan is maximizing our manufacturing capacity for Alaris System pump sets, therefore we are reducing the number of available product SKU's while ensuring we meet our customers' clinical needs. We recognize this may have an impact on your clinical practice. Your account management and clinical consultant team is available to assist you during this transition. This approach maximizes our ability to meet your clinical needs and increased patient volumes due to COVID-19. For information on available SKUs and product substitute recommendations, refer to the [IV Set Formulary Catalog](#).

In response to COVID-19 and the shortage of PPE, we are seeing a practice change to move the Alaris™ System outside of the patient room through the use of extended length extension sets. As a result, BD is experiencing unprecedented demand for extended length extension sets and we anticipate depleting our inventory by the end of March 2020. BD is ramping up production for these products as quickly as possible, and we anticipate inventory in late April 2020. We will have stock out periods as we accelerate our production to meet the new demand of our customers. For more information on clinical considerations for use of extra-long extension sets, please refer to the document [Clinical Considerations](#) for use of extra-long extension sets with the Alaris System.

BD Alaris™ System

We understand that while distribution is suspended for the BD Alaris™ System, you may have an immediate medical need that requires a limited shipment. As a result, we have established a process by which existing customers with Alaris™ System devices may request limited shipment of the BD Alaris™ System software compatible devices upon [certification of medical](#)

necessity. Further due to increased COVID-19 demand, BD will limit approved medical necessity orders to an equitable allocation to ensure we effectively serve our existing customers as well as serve areas of the country with high census due to treatment of COVID-19 patients.

DIABETES CARE

Diabetes Care inventory allocations data — Last updated March 23, 2020						
BD Cat. No.	BD Product Name	Details	Capability	Product Line/Grouping	Brand	Substitutions/Alternates
326895	BD Alcohol swabs	Pkg. of 100	Diabetes care	Support products for self-injection		

INTEGRATED DIAGNOSTIC SOLUTIONS

Substitutions / Alternatives: If Integrated Diagnostic Solutions products are out of stock [see substitutions page](#) for recommended alternative.
